nerdio

SOLUTION BRIEF

Modernize healthcare IT without disrupting care

Simplify Windows 365, Azure Virtual Desktop, and endpoint management so IT teams can focus on supporting clinicians, staff, and patients.

Healthcare IT teams are balancing growing demands with limited resources. Aging infrastructure, expanding clinical applications, security requirements, and distributed workforces all add complexity to environments where reliability matters.

Nerdio helps healthcare organizations modernize their Microsoft environments at their own pace, bringing automation, visibility, and centralized management to Windows 365, Azure Virtual Desktop, and Microsoft Intune.

More control over healthcare IT. More time for patient care.

Support clinical productivity

Give clinicians and staff reliable access to the desktops and applications they need, wherever they work.

Optimize IT spending

Use automation and intelligent resource management to reduce unnecessary infrastructure costs.

Modernize on your terms

Support cloud and hybrid environments while transitioning away from legacy VDI at your own pace.

Simplify IT operations

Centralize management, automate routine tasks, and improve visibility across your environment.

Built for the demands of healthcare IT

From hospitals and health systems to pharmaceutical and life sciences organizations, Nerdio helps IT teams simplify operations across complex Microsoft environments.

1. **Keep clinicians connected**

   Deliver and manage Windows 365 Cloud PCs and Azure Virtual Desktop environments that support access to EHR systems, clinical applications, and everyday productivity tools across locations.

2. **Modernize legacy infrastructure**

   Simplify the transition from traditional VDI environments to Microsoft cloud and hybrid solutions. Support existing infrastructure while introducing new deployment options based on operational, performance, and data residency needs.

3. **Reduce operational overhead**

   Automate provisioning, scaling, image management, and routine administration. Give IT teams more time to focus on strategic initiatives and support clinical operations.

4. **Strengthen visibility and control**

   Bring together management and insights across virtual desktops, Cloud PCs, and physical endpoints to help IT teams identify issues, standardize operations, and support organizational security policies.

CUSTOMER SPOTLIGHT | SYNEOS HEALTH

70% improvement in operational efficiency

Across a global Azure Virtual Desktop environment with Nerdio Manager for Enterprise

"From the business side, the most noticeable benefit is how quickly we can execute."

Linwood Hunter
Senior Workstation Engineer at Syneos Health

SOLUTION BRIEF

Practical solutions for healthcare IT challenges

HEALTHCARE IT CHALLENGE	HOW NERDIO HELPS
Supporting EHR and clinical applications	Simplify deployment, image management, and ongoing administration of virtual desktops that deliver critical applications.
Modernizing legacy VDI	Support migrations to Windows 365 and Azure Virtual Desktop with assessment, planning, and migration capabilities.
Managing distributed clinical teams	Centralize management of Cloud PCs, virtual desktops, and physical endpoints across facilities and remote locations.
Controlling infrastructure costs	Use auto-scaling, resource optimization, and cost insights to reduce unnecessary Azure consumption.
Balancing cloud and on-premises requirements	Manage Azure Virtual Desktop Hybrid environments across Azure Local, Nutanix AHV, and VMware vSphere, giving healthcare organizations greater flexibility to meet performance, data residency, and infrastructure requirements.
Supporting security and compliance initiatives	Simplify administrative access, standardize configurations, and improve visibility across managed environments.

As a Microsoft Partner of the Year winner for 2026, Nerdio is trusted by healthcare organizations to simplify cloud management, reduce costs, and enhance resiliency.

Ready to simplify healthcare IT?

See how Nerdio can help your organization modernize Microsoft environments, reduce operational complexity, and give IT teams more time to support the people delivering care.
