

# Lab Challenge

Designing your Global Views

**1) Create a Global View group for your helpdesk users.**

**2) Within the group, create a new view. The requirements are:**

- Available to your helpdesk users only,
- It should display user sessions for all AVD host pools,
- It should include only managed customers.

**3) Add a second Global View to the same group, this time:**

- Target to the same users and customers as before,
- The view contains only Intune managed devices,
- Sort them by last-check in, so that recently active devices are at the top

Try to tailor the Global Views to make your day-to-day navigation a little easier.
