

Lab Challenge

Deploying and maintaining your Intune policies

- 1) From the **NMM portal**, make sure you have at least 2 customers for which **Intune is enabled**.
- 2) Please have a look at the **list of canned policies** we deliver out-of-the-box.
- 3) Sign in to your (MSP) **Intune Admin Portal** and create your custom **Configuration Policy**
- 4) Back to **NMM**, use the **Import** feature to add your custom policy to the list. Use **Assign** to sync the policy to your Customer Accounts.
- 5) Now, let's say it's 6 months later and you'd like to make a **change** to the settings and **deploy** it to your customers.

- What policy are you missing?
- Or, do you have a different best practice?

- How would you do that without NMM?
- How would you do that using NMM?
